IICS SERVICES OVERVIEW

As Informatica PowerCenter (PWC) nears end-of-life, now is the time to decide whether Informatica In the Cloud Services (IICS) is the most viable platform for your organization

As the end of life for Informatica PowerCenter (PWC) draws near, your organization is likely planning a conversion to Informatica In the Cloud Services (IICS). Your current code is contained in Informatica PWC, so is your immediate next step to convert to the new IICS platform? Before you make this important decision, you should obtain answers to the following questions:

1. Are you having difficulty finding and retaining the key technical resources to maintain your data integration environment?

2. Would you like to realize substantial cost savings from lower data integration costs?

3. Is it time to move to a self-service, SQL-based platform that fully leverages the cloud?

Wyntec has a proven, modernized approach that has been utilized by progressive, data-driven organizations to lift, modernize, and shift their Informatica Platform from PWC to the Cloud. However, as the goal is to optimize your Data Integration Services, some combination of IICS and other services must also be considered during this migration exercise. We offer a unique blend of services that will lower your resource costs and license fees and ensure that you are best utilizing the cloud.

1. **Wyntec's revolutionary A2B Data™ platform provides self-service capabilities that allow your subject matter experts to develop their own transformed objects.** This eliminates the need for complex Informatica mappings that only increasingly scarce and unaffordable ETL developers can understand.

2. **Your expensive Informatica license fees can be minimized by moving to our usage-based subscription services.** We also offer 24/7/365 monitoring and delivery based DataOps support that scales to your budget.

3. **You can better utilize a cloud or hybrid cloud architecture with an elastic, federated framework that manages your data integration across scalable services.** We move your complex Informatica code to SQL-based transformations that truly leverage the elastic cloud services.

About Wyntec, LLC

- Established in 1997 with a focus entirely on DataOps services
- Developed A2B Data™ platform to revolutionize data provisioning
- Pioneered a unique staffing model to provide the right resources at the right time
